Project Title: Online Chatbot based Ticketing System

Sr. No.	Roll No.	PRN No.	Name of student
1	72	SOE2022B0306241	Shriyash Patil
2	75	SOE2022B0306278	Tanmay Nagawade
3	42	SOE2022B0306213	Narendra Khamkar
4	70	SOE2022B0306234	Suraj Pansare
5	77	SOE2022B0306189	Vaishnavi Gopale

Guide/ Supervisors Name: Prof. Sofiya Mujawar

Group no: 48

Progress of the Project

Sr. No.	Project Activity	Description	Date of Completion	Sign of Guide	Sign of lab teacher
1)	Project Planning and Requirement Gathering	Objective: Understand what the system should accomplish. Activities: -Conduct interviews or surveys to gather user needs. -Identify core functionalities (e.g., ticket booking, cancellation, FAQs). -Establish non-functional requirements such as security, scalability, and response time.			
2)	Literature Review and Analysis	Objective: Create a blueprint for how the system will operate. Activities: -Diagram the system components: chatbot interface, backend server, database, and payment processing. -Define data flow between components to ensure smooth interaction. -Consider how to integrate external services like payment gateways and notification systems.			
3)	System Design and Architecture	Objective: Choose appropriate technologies for implementation. Activities: -Decide on programming languages (e.g., Python for backend, JavaScript for frontend). -Select frameworks (Flask/Django for backend, React/Vue for frontend). -Choose a chatbot platform (e.g., Dialogflow, Rasa) that fits your needs.			

Progress of the Project

		-Determine the database type (e.g., MySQL, MongoDB) for storing user and ticket data.			
4)	Machine Learning Model Development	Objective: Build the core interaction layer for users. Activities: -Define user intents (e.g., booking, checking ticket status) and entities (e.g., dates, destinations). -Design conversation flows that map out how users will interact with the chatbot. -Implement the chatbot using the selected platform and connect it to the backend APIs.			
5)	Front-End Development	Design and develop the front-end user interface for the portal using HTML5, CSS3, Bootstrap4, and JavaScript.			
6)	Back-End Development and Database Integration	Objective: Develop the server-side logic and database interactions. Activities: -Build RESTful APIs to handle requests for booking, checking status, and user management. -Design the database schema to support ticket details, user profiles, and transaction records. -Implement authentication and authorization mechanisms to secure user data.			

Progress of the Project

7)	Integration of APIs	Objective: Create a user-friendly interface for interaction. Activities: -Design the frontend layout, focusing on ease of use and aesthetics. -Implement responsive design principles to ensure usability across devices. -Integrate the chatbot interface into the frontend for seamless user interaction.			
9)	Payment Gateway Integration	Implement secure payment gateways (such as PayPal, Stripe, or a local banking system) for transactions in the e-marketplace. Ensure compliance with security standards, including SSL encryption and two-factor authentication (2FA), to safeguard users' payment information.			
10)	Model Testing and Optimization	Objective: Ensure the system functions correctly and meets requirements. Activities: -Conduct unit testing on individual components to verify their functionality. -Perform integration testing to ensure all components work together as intended. -Carry out user acceptance testing with real users to gather feedback and identify issues.			

Project Review details

	Date:	Time: From <u>1:00</u> to <u>4:00</u>	No of hours:
Attendance:			
Sr. No.	Roll No	Name of Student	Signature

4)	70	Suraj Pansare	
5)	77	Vaishnavi Gopale	
Work Done by students: - Developed a responsive frontend using HTML, CSS, and JavaScript. - Built backend with PHP and MySQL for managing users and crop data. - Implemented machine learning algorithms for recommendations. - Created an admin panel for managing users and system data. - Integrated APIs for ticket prices. - Conducted testing and debugging to ensure system performance.
